

Hybrid archive camera

Saves **simultaneously** your documents **digital** and **analog**.

The **hybrid archiv camera** can be used on one hand as a single appliance scanner or filming camera and on the other hand with both functions.

The **hybrid archiv camera** scans up to 400 dpi in color, bitonal or greyscale A5 up to A3 documents simplex and duplex – long documents too. Simultaneously the documents are stored onto 16 mm roll film (factor 25x or 40x (others as an option).

– LONG-TERM ARCHIVING

Two speedy color CCD line scanners provide digitalizing. The 16 mm filming camera is detachable and creates an analog image simplex or duplex of business cards up to A3 documents. The stack feeder (more than 600 sheets) separates the documents via ultrasonic sensor.

The **hybrid archiv camera** enables both comfortable managing of your digital images in the network and safely stored analog images on microfilm.
