

Staide repropix

The **Staide repropix** is a color scanner for books, photos, pictures as well as various documents.

The image will be created with a high resolution camera.

Formate: RAW and JPEG

Maximum resolution: 6048 x 4032 pixel

Within maximally $\frac{1}{2}$ second the **Staide repropix** creates a A4/A3 image (optionally A2), which is stored on Compact Flash or via USB cable directly on the hard drive.

The easy operable software enables to control the quality of the image immediately.

Diffused light cannot interfere the image quality as the image is exposed within a closed case. Besides the exposure light will not glare the operator.

The **Staide repropix** is available both with or without book cradle.

The glass plate (not required) for the book cradle is mounted in the casing and is moved horizontally from the top down to press on the original (no tipping).

In order to turn over pages or to insert originals a drawer is pulling out. Doing this the glass plate remains in the casing. When the drawer is pushed in again the glass plate automatically presses down the original.
